

# Beyond Gun Detection: The Future of ZeroEyes

ZeroEyes was founded to stop gun violence in America. Today, we're taking that mission further.

We're expanding beyond firearm detection to deliver a broader, more intelligent approach to safety. Our goal is to become a single, trusted platform where organizations can monitor, detect, and investigate the full spectrum of security events. **This is the next evolution of ZeroEyes.**

## >> A MORE COMPLETE APPROACH TO SAFETY

Security teams are asked to manage more risk, at greater speed and with fewer resources than ever before. Point solutions are no longer enough.

ZeroEyes is evolving into a unified platform that integrates real-time alerts, operational awareness, and investigative insights. Instead of stitching together multiple tools, our customers can rely on a single system that continuously monitors and protects their organization.

## >> EXPANDING THREAT DETECTION

We continue to lead with our flagship gun detection technology, trusted to identify visible firearms in real time and help teams respond quickly when it matters most.

Now, we're expanding into additional critical threats.

Knife detection is under development to address growing demand in both the US and international markets, with a focus on supporting emerging regulations, such as Martyn's Law in the United Kingdom.

We're also introducing Real Time Threat Geolocation, which enables teams to geolocate threats across multiple cameras based on non-biometric characteristics following an initial threat detection. This provides greater situational awareness during active incidents and reduces the time it takes to locate a person of interest.

## >> STRONGER DAY-TO-DAY SECURITY OPERATIONS

Beyond critical threats, we're adding a suite of General Analytics that help security teams manage everyday activity with confidence.

Teams will be able to set rules to detect intrusions involving people, vehicles, and other objects, monitor crowd formation, identify left behind items, and receive alerts when camera views are obstructed.

We're also introducing real-time Camera Health Monitoring to ensure systems remain operational when they're needed most.

These capabilities provide continuous visibility across environments, helping teams prevent issues before they become incidents.

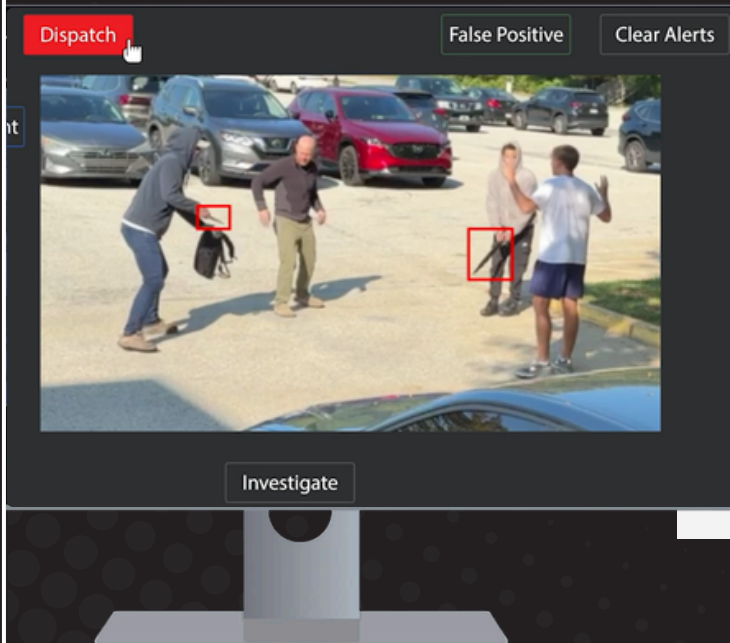

## UNLOCKING INVESTIGATIVE INTELLIGENCE

Security doesn't stop at real-time alerts. Understanding what happened is just as important as responding in the moment.

We're investing in advanced AI capabilities that allow users to search videos using natural language. Teams will be able to ask questions, such as finding every instance of a specific vehicle within a defined area, and receive results in seconds.

This transforms hours of manual review into a fast, intuitive process, enabling teams to uncover insights that were previously out of reach.

### **One Platform. More Protection. Endless Possibilities.**

ZeroEyes is becoming the one-stop shop for modern security.

We're delivering more analytics today and building the foundation for everything that comes next.
