

Inside the ZeroEyes Operations Center (ZOC)

AI-Powered Detection, Governed by Human Expertise

The Mission

The ZeroEyes Operations Center (ZOC) exists for one reason: to help stop gun-related threats before lives are lost. Staffed 24/7 by trained law enforcement and military veterans, the ZOC combines artificial intelligence with human judgment to deliver fast, verified alerts when seconds matter most.

Always-On AI Detection

ZeroEyes integrates with existing security cameras and continuously scans video feeds for visible firearms. The system is purpose-built to detect guns only. It doesn't use facial recognition, biometric identification, or personal profiling.

When the AI identifies what appears to be a firearm, it immediately generates an alert and sends it to the ZeroEyes Operations Center.

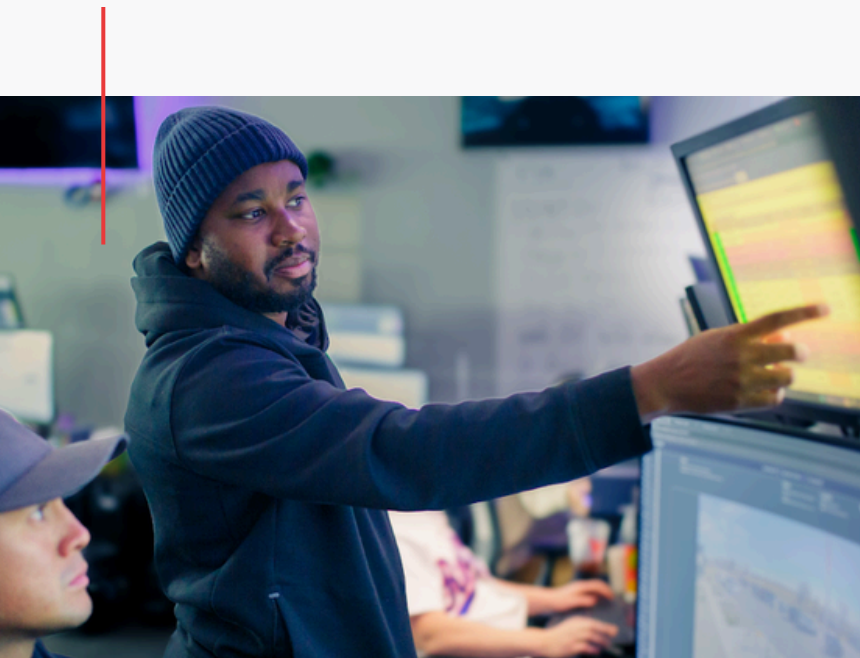

Immediate Human Verification

Within seconds, a ZeroEyes Analyst receives the alert in the ZOC. These Analysts bring real-world experience from law enforcement and military service, enabling rapid, confident decision-making under pressure.

The Analyst verifies:

- ✓ Whether the object is a real firearm
- ✓ The behavior of the individual (brandishing, movement, proximity)
- ✓ The environment and potential risk to others

If available, additional camera angles are reviewed. Alerts are verified in as fast as 3-5 seconds, ensuring speed without sacrificing accuracy.

Threat Assessment & Decision-Making

Once a firearm is confirmed, the Analyst quickly assesses the situation to determine urgency and response. This includes evaluating the location, potential victims, and any visible changes in behavior. Every decision is guided by human judgment, not automation alone, ensuring responsible and reliable outcomes.

Rapid Emergency Notification

After verification, the ZOC immediately initiates response protocols:

- 911 is contacted directly, and dispatchers are provided with clear, actionable intelligence
- On-site security or safety personnel are notified simultaneously

Information shared may include:

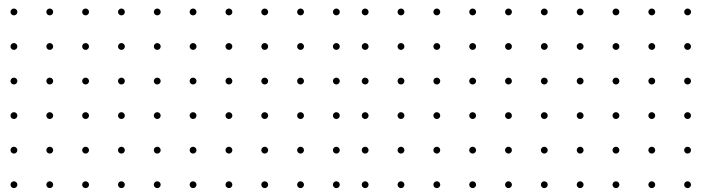

- Exact location and camera view
- Description of the individual and firearm
- Situational awareness of the environment and previous locations
- Real-time updates as the situation evolves

This early, verified intelligence helps responders arrive informed and prepared.

Continuous Support Until Resolution

The ZOC remains engaged throughout the incident, relaying updates to emergency responders and on-site teams as needed. Support continues until authorities confirm the situation is secure.

All incidents are documented to support follow-up and reporting.

Why the ZOC Matters

Speed saves lives, but only when paired with accuracy and judgment. The ZeroEyes Operations Center delivers both.

By combining AI-powered detection with human-governed verification and response, ZeroEyes helps organizations move from awareness to action in seconds, giving first responders the information they need when it matters most.
