# ZeroEyes' A.I. Gun Detection Software is the Only Video Analytics Technology to be Awarded DT&E SAFETY Act Designation

## WHAT IS THE SAFETY ACT?

The Support Anti-Terrorism by Fostering Effective Technologies (SAFETY) Act was enacted by Congress in 2002 to encourage the development and deployment of antiterrorism technologies by limiting the liability of its developers and sellers.

As part of a comprehensive review of ZeroEyes' DT&E Designation application, taking into account testing and deployment plans, along with testimonials from ZeroEyes customers on their technology effectiveness, The Department of Homeland Security (DHS) awarded ZeroEyes with the SAFETY Act DT&E Designation.

## HOW ZEROEYES PROTECTS BUSINESSES

ZeroEyes is the first and only video analytics software of its kind to receive a SAFETY Act Designation from the Department of Homeland Security, meeting the strict criteria established by the DHS.

## WHAT THIS MEANS FOR YOUR COMPANY

The designation means the DHS has placed its confidence in our technology's effectiveness at detecting guns. This gives our customers peace of mind when it comes to security and liability, and gives businesses more confidence in selecting ZeroEyes to help protect employees and customers from mass shootings and gun-related violence.

"It is an honor to be the first video analytics company to receive the SAFETY Act DT&E designation. With its high barrier of entry, the DT&E designation sends a signal to the rest of the industry that ZeroEyes AI gun detection software meets the strict criteria established by the DHS."

— Mike Lahiff, CEO and co-founder of ZeroEyes
